

# SUSTAINABILITY

Sustainability is at the heart of The Pavilion's design and operations. Completed in 2020, The Pavilion features seventy-five 270w poly photovoltaic solar panels, generating 1242 kWh of renewable electricity monthly.

We've also invested in energy-efficient lighting and appliances to further reduce our environmental impact.

We prioritize waste reduction by providing clearly labelled bins for recycling and organic waste during events and collaborate with partners to promote eco-friendly practices.

Conveniently located near public transport, The Pavilion supports sustainable travel options, making it an environmentally responsible choice for any event.
